AI Strategy

OpenAI says ChatGPT search queries now equal 20% of Google's volume

The Verge

OpenAI's consumer product lead revealed that ChatGPT's search query volume has reached 20% of Google's total search volume, a milestone in the shift from traditional search to AI-powered discovery. This signals a meaningful erosion of Google's search monopoly and has major implications for digital advertising, SEO strategy, and any business dependent on search-driven traffic.

Data centers are turning to old jet engines as the wait for grid power grows

TechCrunch

Years-long waits for grid access and new gas turbines are pushing data center builders to repurpose discarded jet engines for power — a less efficient, less green solution. This underscores how power constraints are becoming the binding constraint on AI infrastructure expansion, with implications for cost, ESG commitments, and project timelines.

OpenAI launches Grid Protectors Program to work with utilities on AI power demands

OpenAI Blog

OpenAI announced a program to partner with utilities so that future compute campuses support grid reliability and protect consumer electricity costs. The move acknowledges growing political and public backlash around AI's energy footprint and represents a proactive effort to prevent regulatory intervention on data center power consumption.

Google entirely disabling Search in schools that don't want AI features

The Verge

Google is forcing K-12 schools into an all-or-nothing choice: accept Gemini AI features integrated into Search, or lose access to Google Search entirely. This bundling strategy mirrors classic platform power plays and raises questions about how AI is being embedded into essential services with no opt-out, particularly for vulnerable populations.

OpenAI appoints Jill Hazelbaker as Chief Corporate Affairs Officer

OpenAI Blog

OpenAI hired Jill Hazelbaker to lead global communications and corporate positioning, a senior appointment signaling the company's intensifying focus on political relationships, regulatory strategy, and public perception management as it scales commercially.

Netflix launches AI Discover tab for mood-based content recommendations

The Verge

Netflix is rolling out an 'AI Discover' tab that surfaces content recommendations based on mood and themes rather than viewing history. This is Netflix's most visible AI-powered UX change to date, signaling how streaming platforms are using generative AI to solve the discovery problem and drive engagement.

Enterprise ROI

Palantir's U.S. commercial revenue surpasses government revenue for the first time

TechCrunch

Palantir's U.S. commercial revenue exceeded its government revenue for the first time in the company's history, marking a structural shift in its business. This signals growing enterprise appetite for AI-powered analytics platforms and suggests the commercial AI market is maturing faster than government procurement cycles.

How Cisco uses OpenAI models to defend at machine speed

OpenAI Blog

Cisco is combining its network intelligence with OpenAI models to build more adaptive enterprise security defenses that operate at machine speed. This is a concrete example of a major enterprise vendor integrating AI into core infrastructure products — moving beyond pilot to production-grade cybersecurity applications.

Heimstaden transforms property management across Europe with ChatGPT Enterprise and Codex

OpenAI Blog

European residential real estate firm Heimstaden is using ChatGPT Enterprise and Codex to cut costs and empower employees across its property management operations. This represents a real-world case of AI driving operational efficiency in a traditionally low-tech industry at continental scale.

OpenAI details how ChatGPT and Codex accelerate engineering for the physical world

OpenAI Blog

OpenAI published details on how ChatGPT and Codex are being used to accelerate CAD, PCB design, simulation, and other physical-world engineering workflows. This extends AI's enterprise value proposition beyond software and knowledge work into hardware engineering and manufacturing — sectors with massive GDP impact.

Model & Platform

Anthropic is still grappling with the economics of compute — margins getting worse, not better

TechCrunch

At a moment when Anthropic's compute margins should be improving with scale, they're reportedly deteriorating. This raises fundamental questions about the unit economics of frontier AI model providers and whether the current pricing model for AI inference is sustainable — a critical signal for enterprises budgeting around AI vendor costs.

Apple starts giving Siri AI access to third-party apps in iOS 27.3

The Verge

Apple's iOS 27.3 update lets Siri AI perform actions across all third-party apps using personal context, natural language processing, and on-screen awareness. This is Apple's most significant platform move in AI, potentially reshaping app distribution and user engagement by making Siri the primary interface layer between users and apps.

Funding & M&A

AI inference startup Fal doubles valuation to $16B with $1.3B raise

TechCrunch

Five-year-old AI inference startup Fal raised $1.3 billion led by Bessemer, doubling its valuation to $16 billion. The massive round reflects surging demand for inference infrastructure as enterprises move from model training to production deployment, making inference the new bottleneck and investment magnet in the AI stack.

Ballistic Ventures seeks $490M for new funds amid AI-driven cybersecurity boom

TechCrunch

Cybersecurity-focused VC firm Ballistic Ventures is raising $490M across two funds, betting that AI-driven threats are creating a boom in security spending. The fundraise signals that cybersecurity remains one of the clearest and most defensible enterprise AI investment categories.

PIMCO, Apollo, and the financial industry debate whether AI is a bubble

The Verge

Major financial institutions including PIMCO and Apollo are publicly debating AI valuations and bubble risk, with bond markets now factoring in AI infrastructure exposure. The piece argues that institutional capital flows into AI remain strong despite bubble fears, making a sudden collapse less likely but a correction possible.

AI Ethics & Trust

Anthropic working on FlashProve system to verify AI model identity

TechCrunch

Anthropic is developing FlashProve, a system that would let anyone verify that an AI response genuinely came from the model it claims to be. As AI-generated content proliferates and impersonation risks grow, provenance verification becomes critical infrastructure for enterprise trust, compliance, and fraud prevention.

Nexus Mods mandates AI disclosure for all uploads on the largest PC gaming mod site

The Verge

Nexus Mods, the largest PC gaming mod repository, now requires all uploads to disclose whether AI was used in their creation. While niche to gaming, this is part of a broader trend of platforms implementing AI transparency requirements that could become the norm across creative industries and user-generated content platforms.

Regulatory

Apple restricts AI companions and dating apps to users 18 and up

TechCrunch

Apple's new App Store rules require 18+ ratings for AI companions offering sexual or romantic content, alongside dating apps. This is a significant platform-level regulatory action that will impact the growing AI companion market and signals increasing scrutiny of AI's social and psychological effects on minors.

Trump executive order rebrands AI as 'Super Intelligence' — here's who's falling in line

MIT Technology Review

President Trump signed an executive order directing all government agencies to rebrand AI as 'Super Intelligence,' and the article tracks which agencies and companies are complying. Beyond the branding optics, the move signals the administration's approach to AI governance — prioritizing messaging and political alignment over substantive regulation.

NYC Mayor Zohran Mamdani on data centers, AI risks, and Democratic tech policy

Wired

New York City's mayor discussed the political and economic risks of data center expansion, AI in schools, and how Democrats should approach tech policy ahead of the midterms. The interview reflects growing local government pushback against AI infrastructure costs being passed to consumers and taxpayers.

Midterm elections 2026: data centers, energy costs, and AI safety on voters' minds

The Verge

The 2026 midterm elections are putting AI-related issues directly before voters, including concerns about data center energy costs being passed to consumers and AI safety. Tech industry leaders should note that AI policy is becoming an electoral issue, not just a regulatory one, which could shape the legislative landscape through 2028.

Agentic AI

How 'reverse game theory' could keep AI agents in check

MIT Technology Review

Researchers are applying 'reverse game theory' (mechanism design) to create systems that incentivize AI agents to follow rules rather than find exploits. As agentic AI systems gain autonomy in enterprise workflows, this approach could become essential for governance — designing environments where agents are structurally unable to go rogue.

The agentic web is here: autonomous software agents navigating the internet

MIT Technology Review

MIT Technology Review reports that the 'agentic web' — Tim Berners-Lee's 2001 vision of autonomous software agents navigating the internet on behalf of users — is now becoming reality. This has profound implications for e-commerce, digital services, and web infrastructure as businesses must prepare for AI agents, not humans, as primary web users.

Google Antigravity uses agentic AI to accelerate drug discovery workflows

Google DeepMind Blog

Google DeepMind announced Antigravity, an agentic cheminformatics system that automates compound searching and proposes novel molecular structures for drug discovery. This represents a concrete application of agentic AI in pharma R&D, potentially compressing drug discovery timelines and reducing costs in one of the highest-stakes enterprise applications.

AI Risk

Why you shouldn't use AI chatbots to make voting decisions

Wired

Wired reports that AI chatbots including ChatGPT and Claude exhibit hallucinations and partisan bias when answering election-related queries, making them unreliable for voter decision-making. With midterms underway, this highlights the real-world consequences of AI hallucination in high-stakes civic contexts and the reputational risk for AI providers.

Research to Business

LifeVal: OpenAI introduces benchmark measuring how well AI helps with everyday tasks

OpenAI Blog

OpenAI released LifeVal, a benchmark that measures AI effectiveness on practical everyday tasks like finding childcare, managing finances, and navigating government paperwork. This shifts AI evaluation toward real-world consumer utility rather than abstract reasoning — a meaningful step toward demonstrating tangible ROI for consumer-facing AI products.
