Funding & M&A

Alphabet's record-breaking \$85B raise for Google's AI business is a helluva good signal

TechCrunch AI

Alphabet completed a record-breaking \$85 billion stock sale to fund its AI operations, dwarfing previous capital raises. The sheer scale signals that institutional investors remain overwhelmingly bullish on AI infrastructure bets, and sets a new benchmark for how much capital Big Tech can attract for AI buildout.

Cyera eyes \$12B valuation at 80x ARR multiple despite operating losses

TechCrunch AI

AI-native cybersecurity firm Cyera is nearing a \$300 million round at a \$12 billion valuation — roughly 80x its annual recurring revenue — despite being unprofitable. The valuation multiple illustrates just how much premium investors are placing on AI-security plays, but also raises questions about whether AI-era valuations are sustainable.

Coralogix raises \$200M on bet that someone needs to watch the AI agents

TechCrunch AI

Coralogix raised \$200M to build monitoring infrastructure for AI agents in production, betting that as autonomous systems proliferate, enterprises will need observability tools to troubleshoot failures and ensure reliability. This signals a maturing AI market where the 'picks and shovels' layer around agent operations is attracting serious capital.

Jeff Bezos Is Funding a Wild Hunt for the Brain's 'Core Algorithm'

Wired AI

Flourish, a startup studying real neurons to reinvent AI architectures, has secured \$500 million in funding at a reported \$2.5 billion valuation with Bezos backing. The bet represents a contrarian thesis that transformer-based AI may not be the endgame, and that neuroscience-inspired approaches could yield fundamentally superior systems.

Lovable signs multiyear deal with Google Cloud to up usage 5x

TechCrunch AI

AI coding startup Lovable signed an expanded multiyear deal with Google Cloud involving a 5x expansion of its cloud footprint and expanded access to Anthropic's Claude. The deal highlights how fast-growing AI-native companies are becoming major cloud customers and how cloud providers are using model access as a competitive lever.

Quantum Computing Is Having Its Public Market Moment

Wired AI

Quantinuum is attracting significant investor interest despite ongoing losses, signaling that quantum computing is entering its hype cycle in public markets. For executives tracking the next wave of computational disruption, the timing and valuations offer both opportunity signals and cautionary parallels to early AI investing.

Elon Musk is steamrolling Wall Street to become a trillionaire

The Verge AI

The imminent SpaceX IPO at nearly \$2 trillion would be the largest in history, with implications extending to Musk's xAI and the broader AI investment ecosystem. The offering's structure and Musk's growing cross-company AI-to-space empire will affect index funds, institutional portfolios, and competitive dynamics across multiple industries.

AI Strategy

TSMC struggles to keep up with AI demand: 'We can only support so much'

The Verge AI

TSMC CEO C.C. Wei acknowledged that even with new U.S. factory buildouts, the world's largest chipmaker cannot meet soaring AI chip demand, saying 'we can only support so much.' This capacity bottleneck has direct implications for every company planning AI infrastructure — chip availability remains a binding constraint on AI scaling.

Meta steals a tactic from Tesla and builds data centers in tents

TechCrunch AI

Meta is deploying tent-based data center structures to slash construction costs and timelines for its AI infrastructure buildout. The unconventional approach reflects the intense pressure on hyperscalers to bring compute capacity online faster than traditional construction allows, and could signal new norms in data center deployment.

Microsoft and OpenAI broke up — now they're ready to fight

The Verge AI

At Build 2026, Microsoft unveiled in-house reasoning models, a super app, cybersecurity tools, and AI agents — a clear pivot away from its once-exclusive dependence on OpenAI. The breakup reshapes the competitive landscape: Microsoft is now simultaneously a platform, model maker, and agent builder competing directly with its former partner.

How virtual power plants could provide energy for data centers

Google signed a deal with Voltus to fund a virtual power plant on the largest U.S. power grid, paying consumers to reduce electricity usage to help power data centers. This model could become a template for how AI companies address the growing energy bottleneck without waiting years for new power plant construction.

AI has a water problem — Google thinks it has a fix

The Verge AI

Google announced five water commitments including a goal to replenish more water than its data centers consume by 2030, plus investments in local water infrastructure. With community backlash mounting against AI data center buildouts, water stewardship is becoming a material risk factor for hyperscaler expansion plans.

Kevin O'Leary agrees to downsize massive Utah data center

The Verge AI

Kevin O'Leary agreed to halve his planned 40,000-acre Utah data center project after mounting political and community pressure, removing nearly 20,000 acres near a waterfowl management area. The episode illustrates how local opposition is becoming a real constraint on AI infrastructure expansion across the U.S.

The AI IPO Race Heats Up

Wired AI

Top AI companies are racing toward IPOs, with AI startup stock becoming so coveted that some San Francisco real estate listings now accept Anthropic shares as payment. The IPO wave will be a critical test of whether the AI sector's private-market valuations can survive public-market scrutiny.

Regulatory

Trump signs new AI executive order after shelving original

Wired AI

After scrapping an earlier AI executive order, President Trump signed a revised version promising to promote AI development while addressing safety. The order's specifics — and what was removed from the original — will shape the regulatory environment for U.S. AI companies and their global competitiveness.

Publishers will be able to opt out of AI Search, thanks to new regulation

TechCrunch AI

UK regulators are requiring Google to offer publishers a tool to opt out of generative AI search features, to be tested in the UK then rolled out globally. This sets an important precedent for content rights in the AI era and could meaningfully affect the data available to train and power AI search products.

OpenAI outlines public policy agenda for AI governance

OpenAI Blog

OpenAI published a formal public policy agenda covering safety, youth protection, workforce transition, and global standards. For business leaders, the document signals what regulatory frameworks OpenAI will lobby for — and effectively previews the compliance landscape enterprises may need to navigate.

AI Risk

AI leaders call for tougher protections against AI-aided bioweapons

The Verge AI

Anthropic's Dario Amodei, OpenAI's Sam Altman, and Microsoft's Mustafa Suleyman co-signed an open letter urging Congress to close biosecurity gaps that could enable AI-assisted bioweapon development. The rare cross-industry alignment suggests the threat is taken seriously at the highest levels, and preemptive regulation is likely.

How courts are coping with a flood of AI-generated lawsuits

MIT Technology Review

Federal courts are being overwhelmed by AI-generated legal filings from pro se litigants, raising concerns about hallucinated citations and system strain. For enterprises, this foreshadows broader 'hallucination tax' risks as AI-generated documents proliferate in regulated, high-stakes domains like law and compliance.

AI Ethics & Trust

xAI Asks Court to Strip Alleged Grok Deepfake Nudes Victims of Anonymity

Wired AI

Elon Musk's xAI is asking a court to force four plaintiffs suing over alleged Grok-generated deepfake nudes to reveal their real identities or drop the case. The aggressive legal posture raises reputational and regulatory risks for AI companies and highlights the growing liability exposure around generative AI misuse.

As AI gets better, it reveals an empty promise

The Verge AI

Google's new Gemini agent Spark was so effective it surfaced personal details like pet names and spouse names without being explicitly told — raising immediate privacy concerns. The piece argues that AI 'productivity' tools are optimizing for the wrong outcomes, a caution for enterprises deploying increasingly capable AI assistants.

Stumbling Into AI Emotional Dependence: How Routine AI Interactions Reshape Human Connection

arXiv AI

New research argues that AI emotional dependence doesn't arise from lonely users seeking companion chatbots — it emerges incidentally during routine task-oriented interactions. For enterprises deploying customer-facing AI, this finding has significant liability and duty-of-care implications that boards should consider.

Agentic AI

Meta's AI agent for WhatsApp Business is now available globally

TechCrunch AI

Meta launched its AI business agent on WhatsApp globally, charging businesses based on token usage. With WhatsApp's massive installed base, this makes Meta a direct competitor to enterprise customer service AI vendors and introduces a token-based pricing model that will force businesses to think carefully about AI interaction costs.

Apple approves Poke as the first AI agent on its Messages for Business platform

TechCrunch AI

Apple approved startup Poke as the first AI agent on its Messages for Business platform, enabling consumers to interact with AI agents via iMessage. Apple's entry into agent-mediated commerce through its messaging infrastructure could reshape how brands engage with the iPhone's billion-plus user base.

AI Workforce Impact

Amazon develops a warehouse robot that workers can speak to

The Verge AI

Amazon's new Proteus warehouse robot accepts natural language instructions instead of code, part of the company's growing pivot to replace human workers with AI-powered automation. This represents a step-change in warehouse automation accessibility and signals accelerating labor displacement in logistics.

Enterprise ROI

How Endava is redesigning software delivery around AI agents

OpenAI Blog

IT services firm Endava is rebuilding its entire software delivery process around AI agents, ChatGPT Enterprise, and Codex, moving from augmentation to an AI-native delivery model. For services firms and their clients, this signals a structural shift in how enterprise software gets built — and what it costs.

How Wasmer used Codex to build a Node.js runtime for the edge

OpenAI Blog

Wasmer used OpenAI's Codex with GPT-5.5 to accelerate development 10-20x, shipping a Node.js edge runtime in weeks instead of months. This is a concrete data point for executives evaluating AI-assisted development: a small team achieved months-of-work compression using AI coding tools.
