Funding & M&A

Snowflake signs \$6B deal with AWS for AI CPU chips

TechCrunch

Snowflake committed to a five-year, \$6 billion deal with Amazon Web Services to secure AI chip capacity, signaling a major shift in AI infrastructure spending toward custom silicon and away from Nvidia-only strategies. The deal underscores how cloud providers are leveraging their own chip offerings to lock in enterprise customers and reshape the AI compute market.

AI coding startup Cognition raises \$1B at \$25B pre-money valuation

TechCrunch

Cognition, maker of the AI coding agent Devin, raised \$1 billion at a \$25 billion pre-money valuation — more than doubling its valuation in eight months. With \$492 million in annualized revenue run rate, it's one of the fastest-growing AI startups ever and signals the enormous enterprise appetite for AI-powered software development.

OpenRouter more than doubles valuation to \$1.3B in a year

TechCrunch

OpenRouter raised a \$113 million Series B led by CapitalG, reaching a \$1.3 billion valuation after 5x usage growth in six months. The company's model-routing platform reflects the emerging enterprise reality of multi-model AI strategies, where organizations need abstraction layers to avoid vendor lock-in.

ClickHouse triples annualized revenue to \$250M, charting a path toward an IPO

TechCrunch

Database provider ClickHouse tripled its annualized revenue to \$250 million and is eyeing a public debut within the next few years. The growth reflects surging demand for real-time analytics infrastructure underpinning AI workloads across the enterprise.

Enterprise ROI

Payroll startup Remote grew revenue 50% per employee without adding headcount

TechCrunch

Remote surpassed \$300 million ARR and became cash-flow positive, driven by a 50% increase in revenue per employee through AI adoption — with zero headcount growth. This is one of the clearest public examples of AI delivering measurable productivity gains, making it a benchmark case for the 'AI Value Gap' between adopters and laggards.

AI Strategy

Rethinking organizational design in the age of agentic AI

MIT Technology Review

While 85% of organizations say they want to be 'agentic' within three years, 76% admit their current operations and infrastructure can't support that change. The gap between ambition and execution across people, processes, and workflows is a textbook case of Pilot Purgatory — organizations stuck between AI demos and enterprise-scale deployment.

China is increasingly keeping its best AI talent to itself

TechCrunch

China's AI boom is producing world-class researchers, and Beijing is actively discouraging talent emigration. For global companies relying on Chinese-origin AI talent pipelines, this represents a structural shift in the competitive landscape for AI human capital.

DuckDuckGo installs up 30% as users reject Google's AI Search overhaul

TechCrunch

After Google replaced traditional blue links with AI-generated answers at I/O 2026, DuckDuckGo app installs spiked 30%. The backlash signals real consumer resistance to AI-first search and creates an opening for competitors — while threatening the SEO strategies that underpin billions in digital marketing spend.

Your SEO strategy is optimized for a search engine that no longer exists

TechCrunch

Google's I/O announcement placing AI-generated answers front and center in search fundamentally disrupts SEO strategy. Most brands now have near-zero visibility into how AI describes them to customers, threatening the multi-billion dollar search marketing ecosystem that has driven digital commerce for two decades.

Tech CEOs are apparently suffering from 'AI psychosis'

TechCrunch

Box CEO Aaron Levie warns that 'CEOs are uniquely prone to AI psychosis' — an almost religious belief in AI productivity gains disconnected from operational reality. This captures the GenAI Paradox where executive enthusiasm runs far ahead of measurable business impact, creating risk of misallocated capital and unrealistic transformation timelines.

Agentic AI

AI Agents Plunged the Tech World Into Chaos. Here's Exactly How That Happened

Wired

Wired's deep-dive traces how Claude Code and OpenClaw catalyzed computing's biggest transformation, detailing how autonomous coding agents went from experiment to enterprise disruption. The piece documents concrete examples of how agent-driven development is reshaping software engineering workflows and team structures.

Robinhood will let your AI agent trade stocks

The Verge

Robinhood is enabling users to create separate accounts with pre-loaded balances that AI agents can use to autonomously buy and sell stocks. This marks a significant expansion of agentic AI into regulated financial services, raising questions about liability, risk management, and regulatory response when autonomous systems make consequential financial decisions.

Building self-improving tax agents with Codex

OpenAI Blog

OpenAI partnered with Thrive and Crete to build a self-improving tax agent using Codex that automates filings, improves accuracy over time, and accelerates workflows. This demonstrates agentic AI moving into high-stakes professional services where errors carry direct financial and legal consequences.

Agent lifespan engineering: How long do deployed AI agents stay reliable?

arXiv

New research reveals that long-lived AI agents degrade over time even when model weights are frozen, as interaction history compression, memory growth, and fact revision cause reliability decay. This has direct implications for enterprises deploying persistent AI agents — standard benchmarks completely miss this operational risk.

Model & Platform

Meta launches Instagram, Facebook, and WhatsApp subscriptions with AI plans

TechCrunch

Meta is rolling out paid subscription plans globally across Instagram, Facebook, and WhatsApp under its 'Meta One' brand, with AI-powered features as a key premium tier. This signals Meta's strategy to monetize AI directly through consumer subscriptions rather than solely through advertising, potentially reshaping the economics of social platforms.

Huawei's 'Chip Queen' Throws Down the Gauntlet

Wired

Huawei is adapting to the end of Moore's Law with new chip architecture strategies that could complicate US semiconductor dominance. For business leaders tracking the AI infrastructure supply chain, Huawei's moves signal China's accelerating self-sufficiency in AI chips despite export controls.

MiniMax-M2 Series: Mixture-of-Experts model with 230B parameters, only 9.8B activated per token

arXiv

MiniMax released M2, a 230-billion-parameter mixture-of-experts model that activates only 9.8 billion parameters per token, designed end-to-end for agentic deployment. This architecture addresses Token Anxiety directly — delivering frontier-class performance at a fraction of the compute cost, which has major implications for enterprise AI deployment economics.

AI Ethics & Trust

YouTube will now automatically label AI-generated videos

The Verge

YouTube will automatically detect and label photorealistic AI-generated content rather than relying on creator self-disclosure, making AI labels more prominent. This sets a new platform standard for AI content transparency and has implications for brand safety, misinformation management, and content authenticity across digital media.

Pope Leo XIV's first encyclical warns about concentration of AI power

Wired

Pope Leo XIV's encyclical 'Magnifica Humanitas' warns that AI touches on 'rights, opportunities, status and freedom' and decries the concentration of technological power in a few global players. Anthropic's Christopher Olah joined the presentation, signaling an unprecedented alliance between the Catholic Church (1.4 billion adherents) and Silicon Valley on AI governance.

AI Risk

I'm a Professional Fact-Checker. AI Is Wrong More Often Than You Think

Wired

A professional WIRED fact-checker tested AI systems on real fact-checking tasks and found error rates far higher than commonly assumed. For enterprises relying on AI-generated content in marketing, legal, or customer communications, this underscores the hidden 'Hallucination Tax' — the cumulative cost of detecting and correcting AI errors at scale.

AI Workforce Impact

The AI fight brewing inside The New York Times

The Verge

Unionized staff at The New York Times are preparing to fight management over AI use in newsrooms, with rules being hammered out at the bargaining table. This is a leading indicator for how AI deployment will increasingly become a labor-relations issue across knowledge-work industries.

A reality check on the AI jobs hysteria

MIT Technology Review

Despite high-profile layoffs at Coinbase, Meta, and Cisco attributed to AI, aggregate employment data shows scant evidence of large-scale AI-driven job displacement. The piece argues the narrative has outrun the data, providing a useful counterpoint for leaders making workforce planning decisions.

It's time to address the looming crisis in entry-level work

MIT Technology Review

While overall employment remains stable, AI may be quietly eliminating entry-level positions that serve as career on-ramps for young professionals. This 'first rung' problem threatens long-term talent pipelines and has serious implications for workforce development strategy across industries.

AI Is Taking Over Debt Collection

Wired

There's a rush to automate debt collection with AI agents handling calls to consumers with unpaid bills. This represents hyper-automation of an entire workflow in financial services, with significant implications for compliance, consumer protection regulation, and the large debt collection workforce.

Regulatory

AI warfare is already here

The Verge

Lethal autonomous weapons systems, once dismissed as hypothetical at UN conventions, are now actively deployed in warfare. The piece examines the collapse of the gap between policy discussion and battlefield reality, with implications for defense contractors, government AI procurement, and international regulation.

OpenAI publishes election information safeguards for 2026

OpenAI Blog

Ahead of global elections in 2026, OpenAI outlined measures to help users access accurate information, support cyber defenders, and increase AI transparency. With AI-generated disinformation a growing concern, these self-regulatory moves set expectations that other AI providers will face pressure to match.

Universal Music Group and TikTok renew agreement to combat unauthorized AI music

TechCrunch

UMG and TikTok renewed their agreement with specific provisions targeting AI-generated music that mimics copyrighted artists. This deal sets a precedent for how intellectual property rights will be enforced in the age of generative AI across the entertainment industry.
